Cabinet Suction

Freedom, Reliability, and Clean Design

The Fimet Cabinet Suction is a complete, independent suction solution designed to make daily dental work smoother and more hygienic.

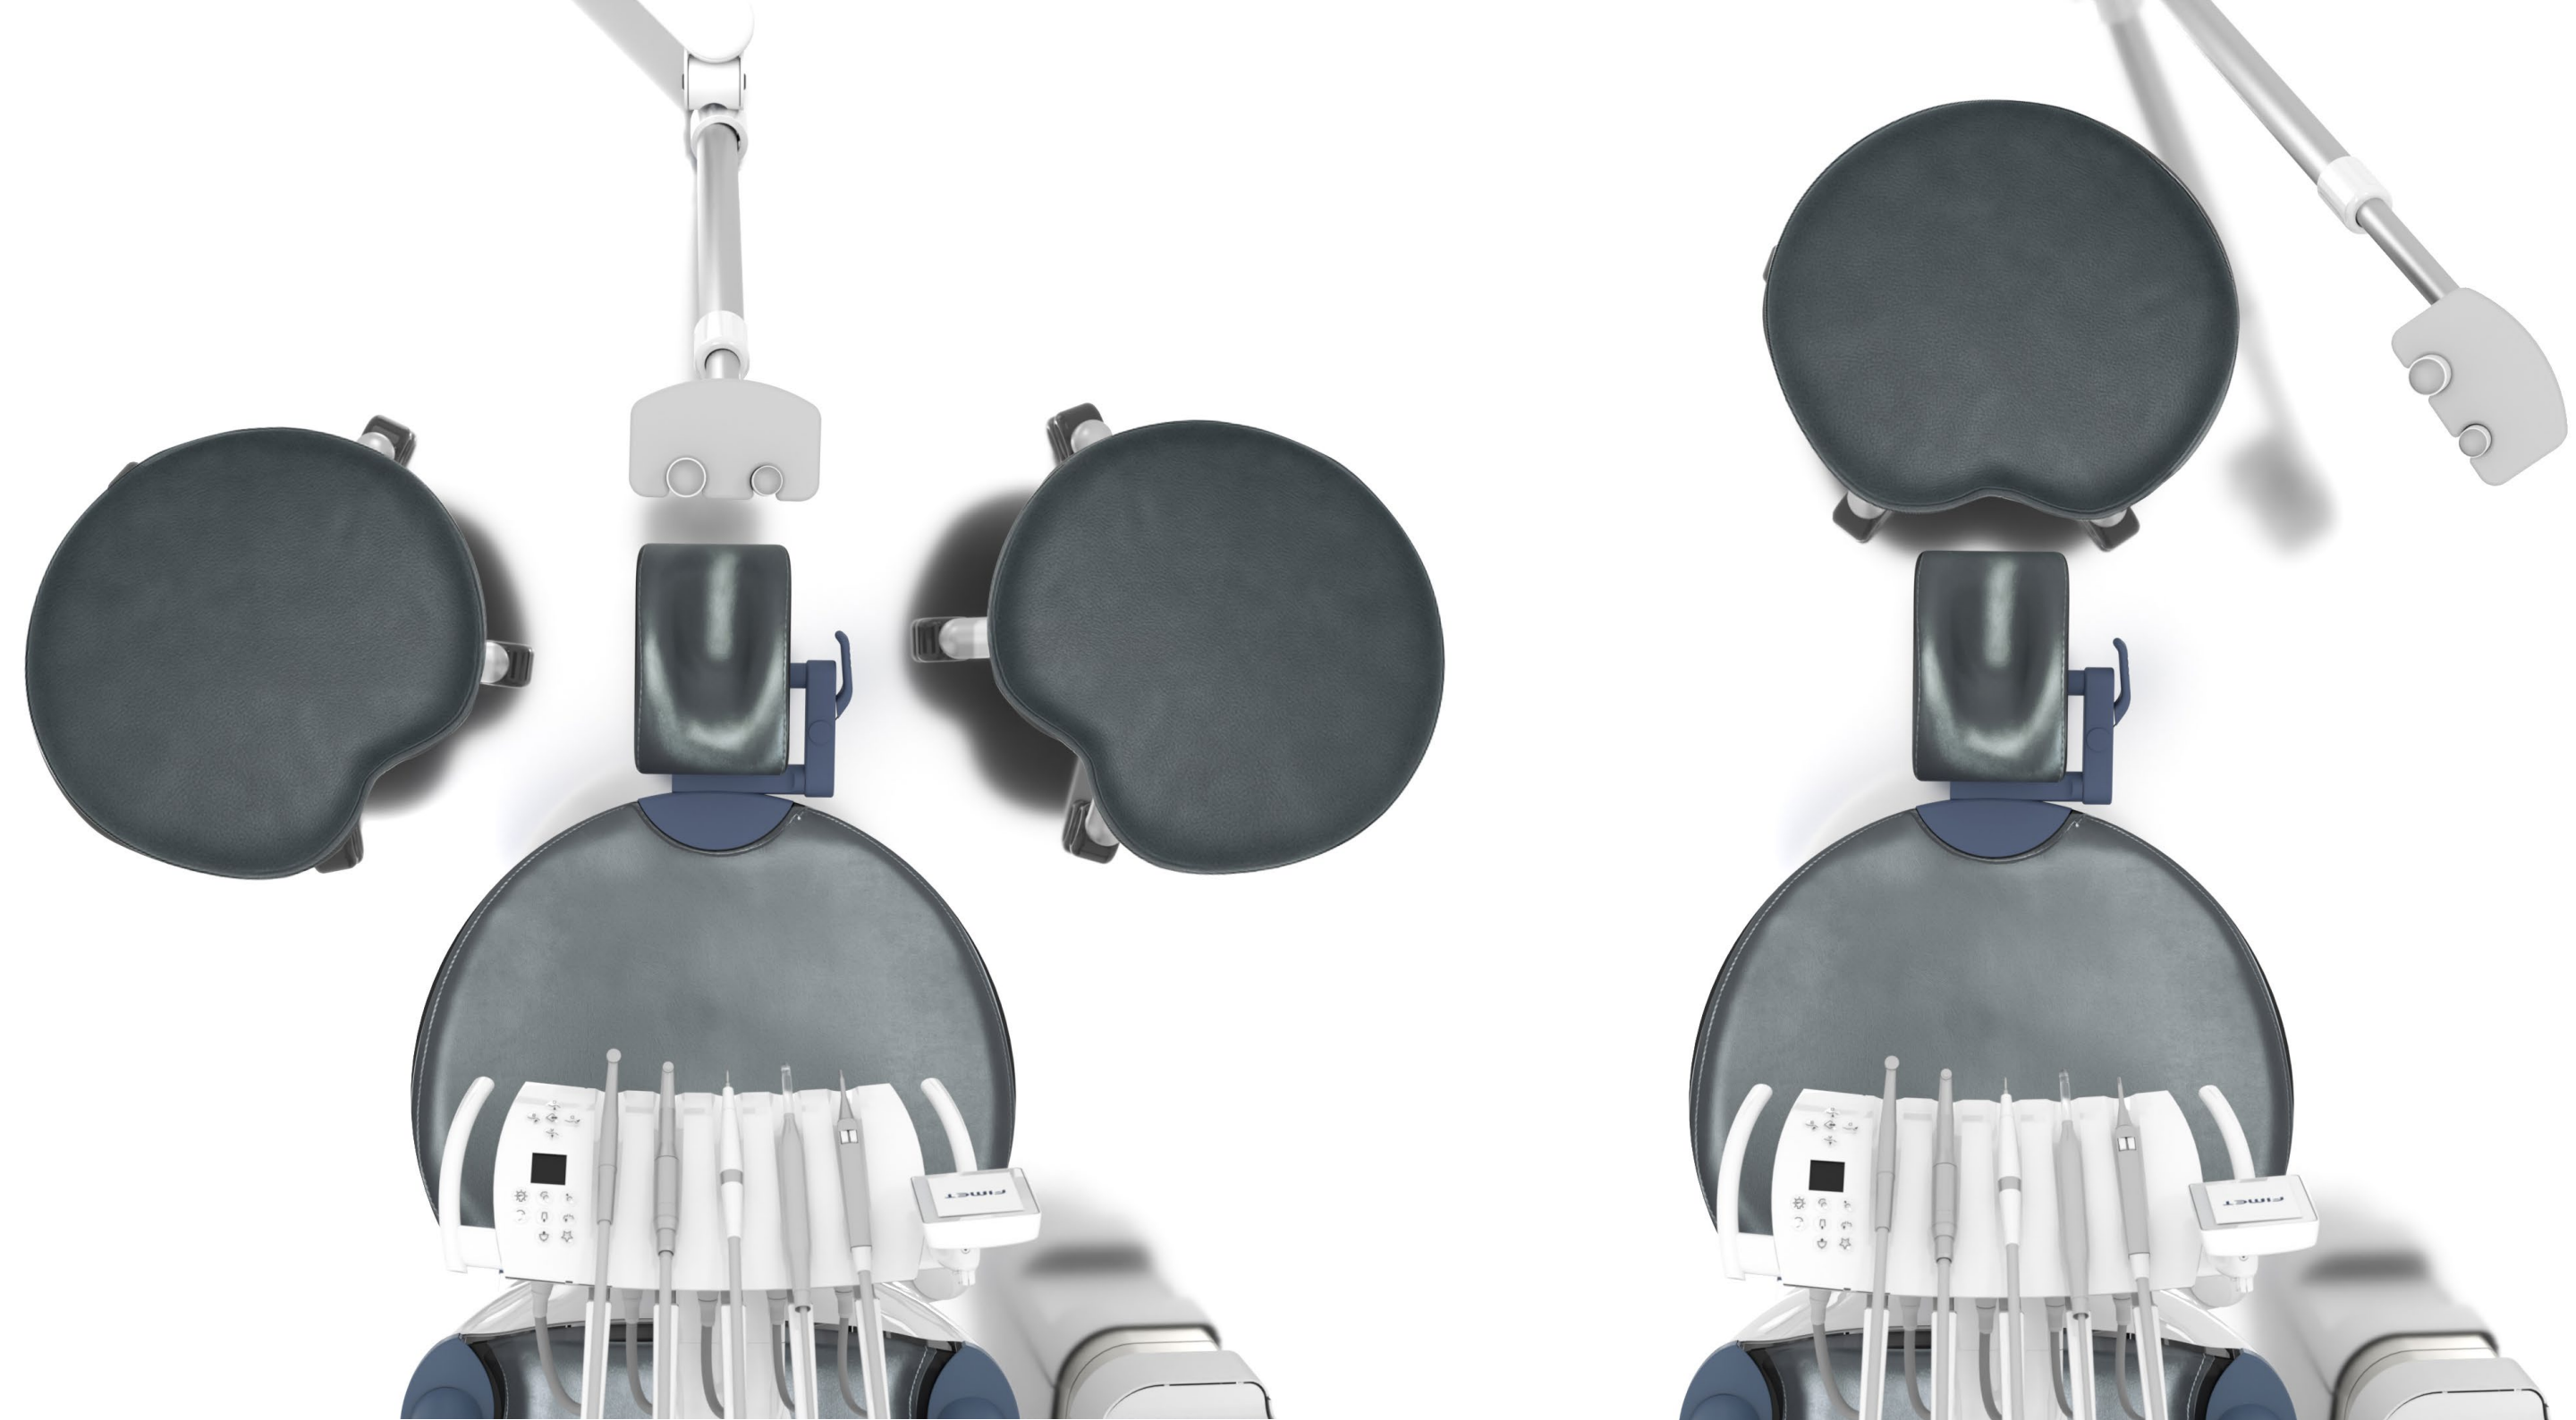

Installed in a cabinet behind the chair, it provides silent and consistent suction power, ergonomic access, and effortless maintenance — helping clinics create cleaner, more efficient treatment environments for themselves, but also for their patients

Comfort That Follows Your Movements

With the telescopic suction head arm, suction head moves naturally with you — offering full reach, light handling, and precise positioning.

It's designed for effortless use whether working solo or with an assistant, keeping everything within comfortable reach and minimizing wrist strain.

Easy to Install, Even Easier to Maintain

The Cabinet Suction is delivered as a ready-to-use package with all necessary connections included – power, drain, and central suction interface.

All service parts are accessible from the front of the cabinet, making maintenance quick and simple. All parts requiring regular service are right behind the cabinet door. Effortless service in minimal time with minimal tools.

It's built to minimize downtime and maximize reliability, to ensure your productiveness.

Independent Power You Can Depend On

The device includes its own separator, and power controls, ensuring constant suction performance regardless of the dental treatment system.

The device supports control integration with all dental units, giving clinics complete flexibility when upgrading or expanding their equipment.

Ready-to-use product package

Electrical network
Central suction system
Drain

Automatic suction disinfection

Water connection

Four Configurations for Different Needs

Amalgam separator configurations

When dentists remove or place amalgam fillings, small particles containing mercury, silver, tin, and copper are released into the wastewater. The amalgam separator captures these particles before the water leaves the Fimet Cabinet Suction or dental unit.

Configurations

Suction line and -system disinfection configurations

Suction line and -system disinfection configurations are integrated into a dental suction system so that the internal tubing, hoses, and connections are regularly treated with a disinfecting agent.

Using a replaceable disinfection fluid bag that lasts up to 2-3 months, it ensures consistent hygiene and safe operation – every day, for every patient.

Configurations

Smarter Suction for a Better Working Day

With the Fimet Cabinet Suction, you gain independence, reliability, and comfort – all designed to make your daily work cleaner, quieter, and easier.

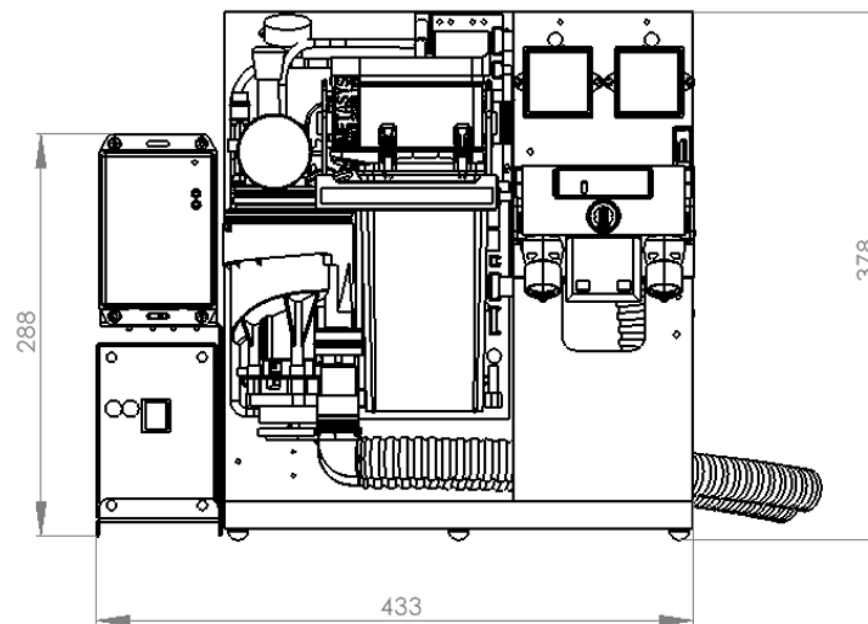

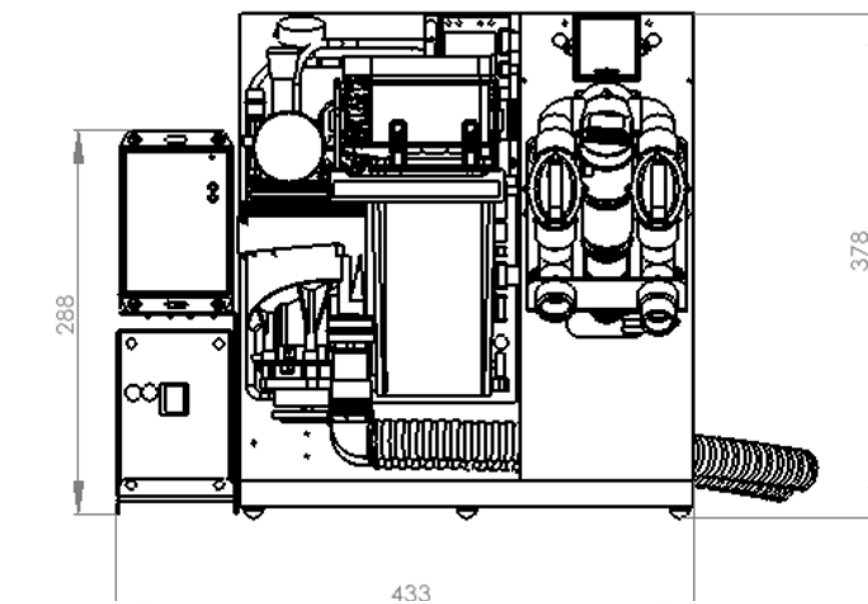

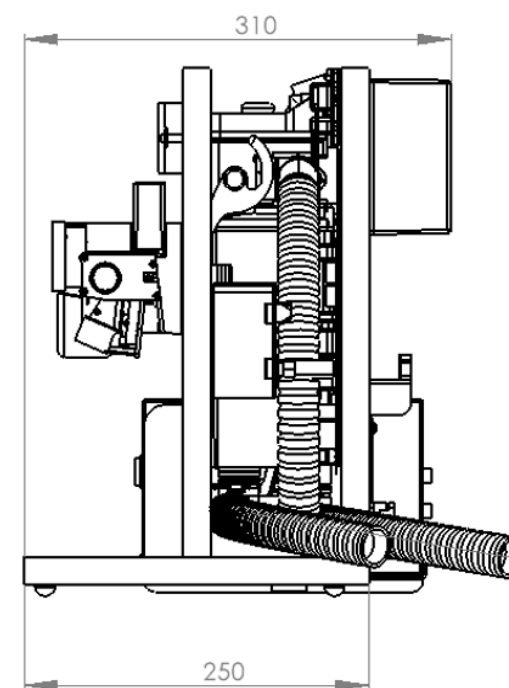

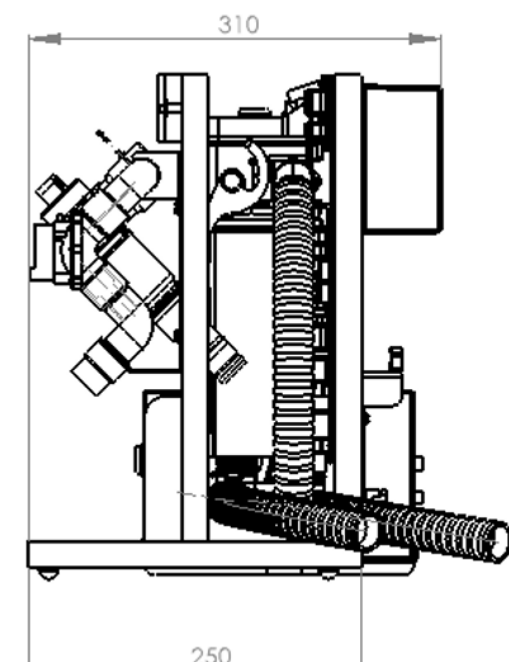

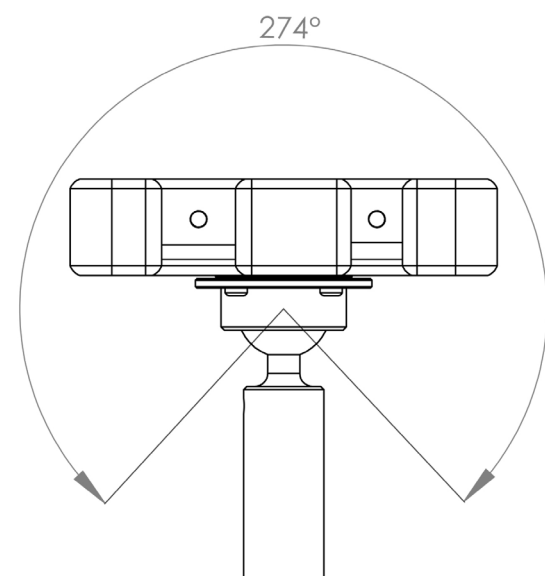

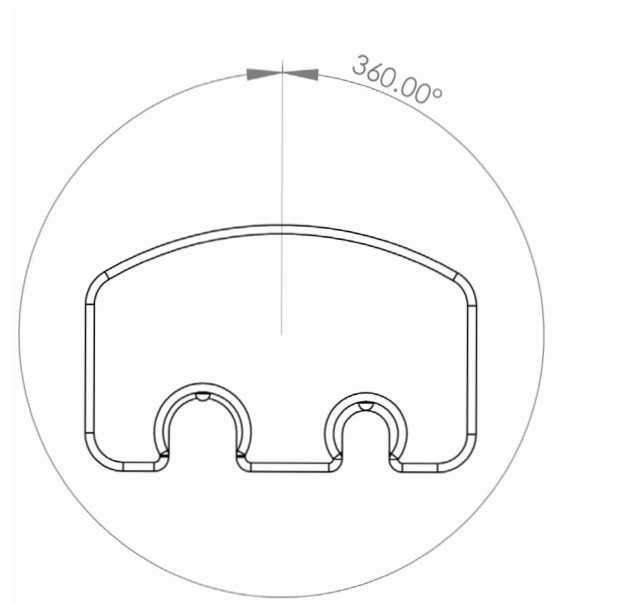

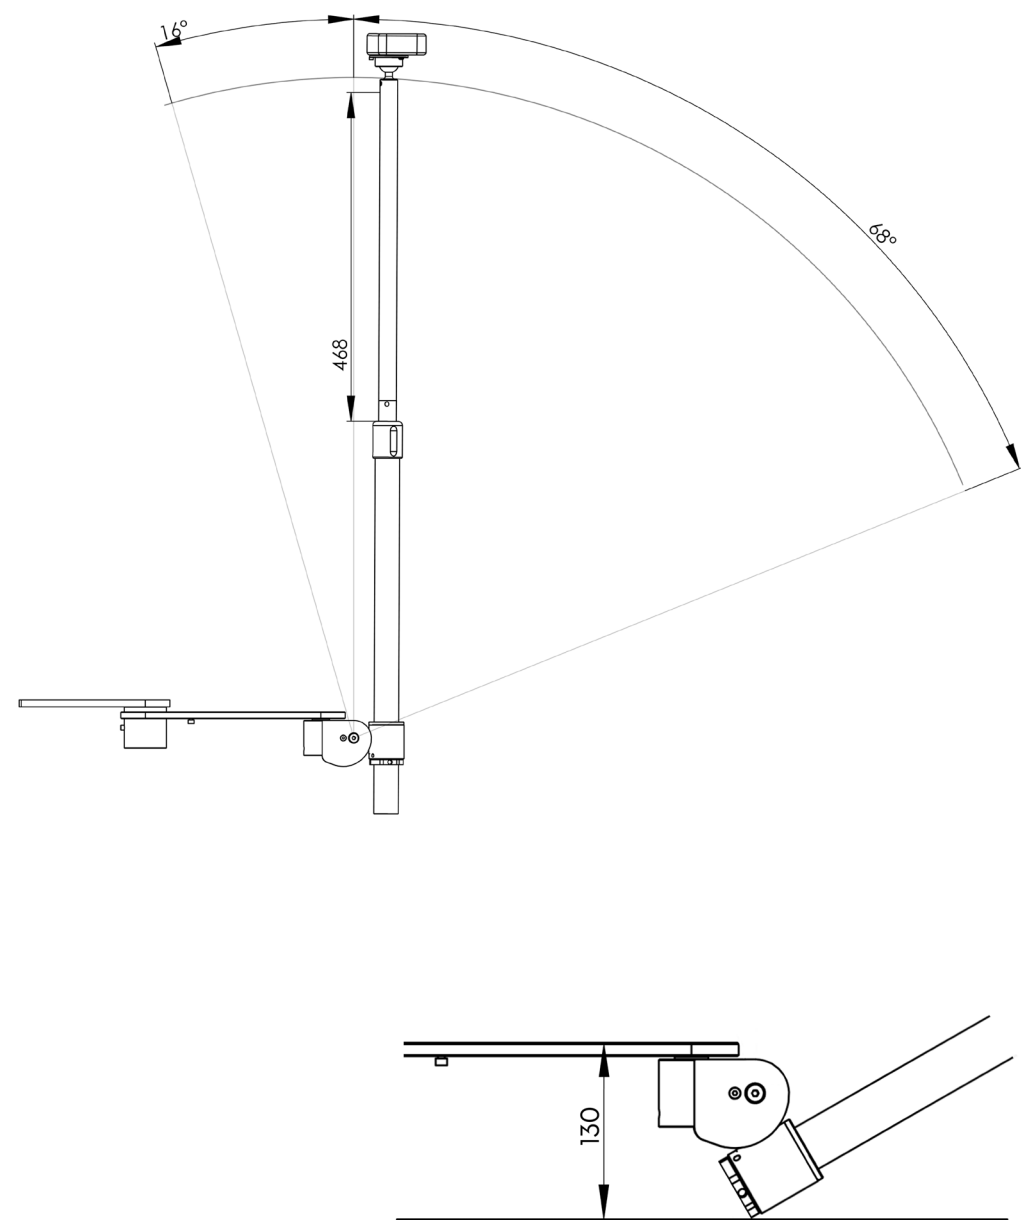

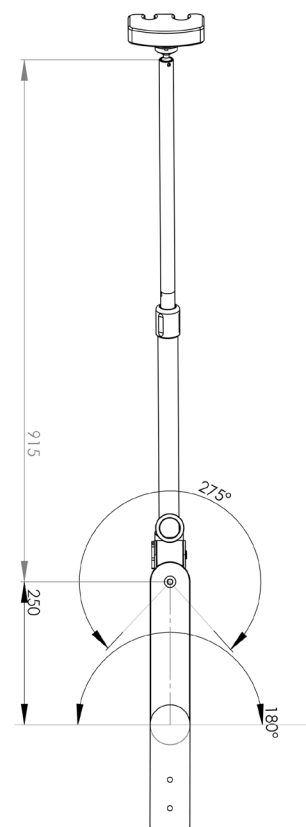

It's the smarter way to manage suction in a modern dental clinic.
